

PRESS RELEASE

Heyaru and Bronkhorst join forces in the production of diamonds

Heyaru Engineering, manufacturer of laboratory grown diamonds, plans for a multimillion Euro investment in Lommel, Belgium for which they have received [STS support from the Flemish government](#).

A couple of months back Heyaru created their [first Belgium grown diamond](#). Once the complete project is installed (in about 5 years) Heyaru will be able to produce about 200 Kilos of Laboratory grown diamonds per year. The company will be the largest diamond grower in Europe.

For reaching to that amount of production quantities, Heyaru will need couple of hundred of reactors. Bronkhorst High-Tech, with its headquarters based in The Netherlands, have entered into a relationship with the Bulgarian partner of Heyaru, supplying state of the art, plug & perform gas flow controllers for the fully automated reactors.

Bronkhorst will play a crucial role in designing, building & implementing the flow controllers to increase reliability, improve yield, and enhance safety of Heyaru's employees and the process.

By joining forces with Bronkhorst, one can say that Heyaru generates indirect employment in The Netherlands.
